Table of Contents

1. Executive Summary

Key Metrics, Critical Issues & Quick Wins

2. Audit Categories

What Works

Findings by Severity

3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **globescott.net** for a **Manufacturer / Local B2B (DC, BLDC, Geared & PMDC motors and railway signalling products) — Killa Pardi, Gujarat, India** site, generated on August 13, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

42/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** Relative asset/link paths (wp-content/..., href="about-us/") combined with .htaccess trailing-slash directory URLs will 404 all CSS/JS/fonts and break navigation on every non-root page once deployed
2. **Info:** Zero meta descriptions across all 21 pages
3. **Info:** Zero canonical tags, Open Graph, or Twitter Card tags site-wide
4. **Info:** Zero structured data (JSON-LD) — no Organization, LocalBusiness, Product, Breadcrumb, or Article schema
5. **Info:** No robots.txt, no XML sitemap, no llms.txt

Quick Wins:

1. Add robots.txt + XML sitemap (templates provided in fixes/)
2. Add Organization + LocalBusiness JSON-LD to header (template provided)
3. Add per-page meta description + canonical + Open Graph via header include
4. Fix broken internal link /dc-mo/ -> /products-pmdc-motors/
5. Remove outdated 2020 COVID-19 banner from global header

2. Audit Categories

2.1 Technical SEO

Score: **35/100**

What Works

- Clean, keyword-friendly extensionless URLs with trailing slashes enforced via .htaccess
- 301 redirect from .php to canonical directory URL
- Valid viewport meta and lang=en-US declared
- Semantic breadcrumb navigation with aria-label on interior pages
- Each page owns a single <main> (no duplicate landmarks from header/footer)

Findings

Relative asset & link paths break on trailing-slash URLs **Critical**

header.php loads CSS/JS as wp-content/... and wp-includes/... (no leading slash); nav uses href="index/", href="about-us/"; contact form uses action="contact-us/"; some backgrounds use url(wp-content/...). .htaccess 301-redirects every page to a directory URL (e.g. /about-us/). A browser resolves wp-content/themes/.../style.css on /about-us/ to /about-us/wp-content/themes/.../style.css, which does not exist -> the page renders unstyled and navigation is broken. The homepage linked as index/ has the same failure.

Recommendation: Convert every asset src/href and internal link to root-relative paths (leading /), or add <base href="https://www.globescott.net/"> to <head>. Root-relative is preferred. Verify on the live server after deploy.

No canonical tags site-wide **Critical**

0 of 21 pages emit <link rel="canonical">. With .php and directory URL variants both resolvable, duplicate-URL indexation risk is high.

Recommendation: Emit a self-referencing absolute canonical in header.php built from SITE_URL + current page slug with trailing slash.

No robots.txt and no XML sitemap **High**

Neither /robots.txt nor /sitemap.xml exists. Crawlers have no sitemap hint and no crawl directives.

Recommendation: Add robots.txt referencing an XML sitemap listing all 21 canonical URLs (templates in fixes/).

config SITE_URL points to http://localhost:8000 **High**

includes/config.php defines SITE_URL as http://localhost:8000. Any absolute URL generation (canonical, sitemap, OG, schema) built from this will be wrong in production.

Recommendation: Set SITE_URL to https://www.globescott.net and standardize on the www + https host (matches the absolute image URLs already in the code).

Non-functional WordPress leftover forms **Medium**

Blog comment forms POST to https://www.globescott.net/wp-comments-post/ and sidebar search forms GET https://www.globescott.net/ — both are WordPress endpoints that no longer exist in the static rebuild, so they 404 / do nothing.

Recommendation: Remove the comment and search widgets, or wire them to a working handler. Dead interactive elements harm UX and crawl budget.

Broken internal link /dc-mo/ **Medium**

products-pmdc-motors.php links 'DC motor' to href="/dc-mo/", a truncated slug that 404s.

Recommendation: Point it to /products-pmdc-motors/ or /what-is-bldc-motor/ as appropriate.

Render-blocking resources in <head> **Medium**

~15 separate stylesheets plus jQuery load in <head> unminified/unbundled. No preconnect, no critical-CSS inlining beyond theme inline block.

Recommendation: Bundle & minify CSS, defer non-critical CSS, move jQuery to footer with defer, add preconnect for fonts.

2.2 On-Page SEO

Score: **45/100**

What Works

- Every page has a unique <title>
- Consistent brand suffix pattern in titles
- Interior pages use a single H1
- Descriptive image alt text on product thumbnails and contact icons

Findings

No meta descriptions on any page **High**

0 of 21 pages define a meta description; header.php never outputs one. Google will auto-generate snippets, reducing CTR control.

Recommendation: Add a `$meta_description` variable per page and output `<meta name="description">` in header.php. 140-160 chars, keyword + value proposition + location.

Homepage has 4 H1 tags **Medium**

The homepage slider renders 4 `<h1>` tags (Driving Motorized Innovation, Guaranteed Faster Engineering Solution, Best Motors For Amusement Park Rides, Motors For Material Handling Equipments). Multiple H1s dilute topical focus and none contains the primary keyword 'DC motor manufacturer'.

Recommendation: Keep one H1 (e.g. 'DC, BLDC & Geared Motor Manufacturer in India') and demote slider slide headings to `<h2>`/`<span>`.

Titles under-optimized (no keywords/location, brand-first, all-caps) **Medium**

Titles like 'Products – GLOBE SCOTT MOTORS PVT LTD' and 'About us – ...' lead with generic labels and all-caps brand; product/blog titles omit high-intent keywords and location (India / Gujarat).

Recommendation: Front-load keywords: e.g. 'PMDC Motors Manufacturer & Supplier in India | Globe Scott Motors'. Use title case, keep 50-60 chars.

Spelling errors baked into URLs, titles and H1s **Medium**

URL/title/H1 misspellings: 'Benifits' (benefits-of-using-dc-motors), 'Transaxel' (should be Transaxle; also inconsistent with menu 'PMDC Transaxle'), 'Amuzement', 'Handeling', 'morden'. These appear in indexable slugs and headings.

Recommendation: Correct spellings; 301-redirect old slugs to corrected ones (benefits-of-using-dc-motors, products-pmdc-transaxle).

Missing alt text on key images **Low**

13 homepage images, 2 about-us, 2 applications images lack alt; the footer logo uses `alt=""`.

Recommendation: Add descriptive alt to all meaningful images; give the footer logo `alt="Globe Scott Motors"`.

2.3 Content Quality

Score: **55/100**

What Works

- Genuine manufacturer expertise: detailed railway-signalling (~1,700 words) and PMDC (~1,000 words) pages
- Company history since 1985 and Indo-US collaboration story (E-E-A-T)
- ISO 9001:2015 and CE certification signals on About page
- Real NAP, phone, email and embedded Google Map

Findings

Thin product & hub pages **High**

products-bldc-motors (~36 words), applications (~45 words of text over 9 images), products hub (~136 words), products-pmdc-transaxel (~179 words), products-pmdc-geared-motors (~223 words). Too thin to rank for product queries.

Recommendation: Expand each product page to 400-700 words: specs (voltage, power, RPM, torque), applications, materials, differentiators, and a spec table.

Outdated 2020 COVID-19 banner in global header **Medium**

header.php hardcodes a 'COVID-19 Alert: We have resumed manufacturing...' banner on every page, signalling stale, unmaintained content.

Recommendation: Remove the banner.

No author, dates, or E-E-A-T bylines on blog articles **Medium**

Blog posts lack visible author, credentials, and publish/updated dates in a structured way; comment sections are non-functional.

Recommendation: Add author bio + engineering credentials, publish/updated dates, and Article schema.

Duplicated boilerplate across product blurbs **Low**

Product hub blurbs are generic marketing sentences with little unique, specification-rich content.

Recommendation: Replace with unique, spec-driven copy per product family.

2.4 Schema / Structured Data

Score: **5/100**

Findings

No structured data anywhere **High**

0 JSON-LD blocks. Missing Organization, LocalBusiness (the business is a physical manufacturer with NAP + map), Product, BreadcrumbList, Article, and WebSite schema. This blocks rich results and weakens entity/AI understanding.

Recommendation: Add Organization + LocalBusiness (with geo, address, sameAs socials) sitewide, BreadcrumbList on interior pages, Product/ItemList on product pages, and Article on blog posts. Templates in `fixes/schema-organization-localbusiness.jsonld`.

2.5 Performance (CWV)

Score: **45/100**

What Works

- `loading="lazy"` and `srcset` present on several product images
- Most JavaScript loads before `</body>` rather than in `<head>`

Findings

No modern image formats; heavy PNG/JPEG payload **High**

~10 MB of images across 188 files, 0 WebP/AVIF. Largest single images 300-430 KB; many product photos shipped as PNG. Hurts LCP on image-led hero/slider and product pages.

Recommendation: Convert to WebP/AVIF, compress, and serve appropriately sized variants. Target hero/LCP image < 150 KB.

Heavy homepage slider + many third-party libraries **Medium**

Homepage uses a Slick slider with large full-bleed backgrounds plus Bootstrap, Isotope, Magnific Popup, WOW, Waypoints, CounterUp, Meanmenu, Popper, jQuery — a large JS footprint for a brochure site.

Recommendation: Remove unused libraries, defer/async scripts, lazy-init the slider, and preload the first slide image.

Unminified/unbundled CSS & JS **Medium**

~15 CSS and ~17 JS files load individually; several are theme/plugin defaults likely partly unused.

Recommendation: Bundle, minify, tree-shake unused CSS, and add long-cache headers.

2.6 AI Search Readiness (GEO)

Score: **40/100**

What Works

- Clear, extractable factual text on what products are and where the company operates
- Consistent NAP and company facts

Findings

No entity/structured signals for AI engines **Medium**

No Organization/LocalBusiness schema, no sameAs to social profiles, no author entities, no FAQ schema. AI Overviews/ChatGPT/Perplexity have weak grounding for brand facts.

Recommendation: Add schema + sameAs, add concise FAQ blocks with FAQPage schema on product/blog pages, and ensure key facts (founded 1985, Indo-US JV, certifications, product families) appear as clean prose.

No llms.txt (optional) **Low**

No /llms.txt. Optional and ignored by Google, but cheap to add for AI-crawler guidance.

Recommendation: Optionally add /llms.txt summarizing the company and key URLs.

2.7 Local SEO

Score: **50/100**

What Works

- Consistent NAP in header, footer and contact page
- Embedded Google Map for the Killa Pardi, Gujarat location
- Linked Facebook, Twitter/X and LinkedIn profiles

Findings

No LocalBusiness schema / geo coordinates **Medium**

The business is a physical manufacturer but exposes no LocalBusiness/Organization schema with address, geo, openingHours, or sameAs.

Recommendation: Add LocalBusiness JSON-LD (fixes/) and ensure the Google Business Profile is claimed and NAP-consistent.

Map iframe has pointer-events disabled **Low**

The contact-page map iframe sets pointer-events:none, reducing interactivity.

Recommendation: Allow interaction or provide a 'Get directions' link to the GBP listing.

2.8 Images

Score: **45/100**

What Works

- srcset + lazy loading on product thumbnails
- Mostly descriptive alt text on product images

Findings

No WebP/AVIF and oversized files **Medium**

0 next-gen images; 10 MB total; several 300-430 KB assets.

Recommendation: Convert to WebP/AVIF, compress, and size correctly.

13+ images missing alt **Low**

Homepage (13), about-us (2), applications (2), footer logo (empty alt).

Recommendation: Add descriptive alt text to all meaningful images.

3. Action Plan

Phase 1: Critical Fixes Week 1

- Fix relative asset/link paths (root-relative or <base>) and verify every interior page renders styled with working nav on the live server
- Add self-referencing canonical tags in header.php
- Set config SITE_URL to https://www.globescott.net and standardize on www+https
- Publish robots.txt and sitemap.xml
- Fix broken /dc-mo/ link

Phase 2: High-Impact Improvements Weeks 2-3

- Add per-page meta descriptions + Open Graph/Twitter tags via header.php
- Add Organization + LocalBusiness + BreadcrumbList JSON-LD
- Reduce homepage to a single keyword-focused H1
- Rewrite titles with keywords + location
- Correct spelling in slugs/titles/H1s and 301 old slugs
- Convert images to WebP/AVIF and compress; add missing alt text
- Remove COVID-19 banner and dead WordPress comment/search forms

Phase 3: Content & Authority Month 2

- Expand thin product pages to 400-700 words with spec tables
- Add Product/ItemList schema and FAQ blocks (FAQPage schema)
- Add author bios, dates and Article schema to blog posts
- Build an internal-linking structure from blog posts to product pages
- Claim/optimize Google Business Profile; ensure NAP consistency

Phase 4: Monitoring & Iteration Ongoing

- Verify in Google Search Console (submit sitemap, check coverage/Core Web Vitals)
- Track rankings for 'PMDC motor manufacturer India', 'railway signalling motors', etc.
- Bundle/minify assets and monitor Core Web Vitals field data
- Publish new technical blog content on a schedule

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO — Google SEO Intelligence Skill — August 13, 2026

Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
